# BUZZING MATHS RESOURCES FOR USE IN THE CLASSROOM AND AT HOME

## SERIOUSLY. THIS IS MORE THAN JUST A BIT GOOD. IT'S THE NECTAR OF TEACHING MATHS!

Here at jolly old Buzzard Publishing we've made a great set of resources perfectly aimed at what teachers need to get the best out of their maths teaching. Our extensive experience (look, we're not old or anything, just really experienced) in the classroom and years of listening to other teachers has told us what resources you value most. So, here we proudly present **GET THE BUZZ**; a cracking series in four parts, three in the classroom with a grand finale at home.

### PROBLEM SOLVING

Photocopiable challenges that help teachers engage with the aims of the mathematics curriculum. This resource will prove vital for developing problem solving skills, boosting confidence and ensuring enjoyment in whole class, group and paired learning.

*develop problem solving skills*

*apply mathematics learning*

*ideal for assessment*

Many of the problems can be easily adapted or extended to create further challenge. Each book has a range of challenges, including place value, calculations, money and shape.

### MATHS GAMES

A copiable resource which helps teachers to make mathematics fun for learners. This is a flexible resource to supplement existing maths plans within any primary school. As a series of carefully created and targeted maths games, it will be highly beneficial for developing fluency, promoting maths language and boosting skills in whole class, group and paired learning.

*easy to differentiate*

*develops fluency in the fundamentals*

*makes learning fun*

Many of the games are suitable for home learning.

### LEARN THOSE TABLES

Developing fluency in foundational maths knowledge increases a learner's working memory to tackle maths problems.

Learn Those Tables gives guidance on how to build the multiplication table, using doubling and halving as well as repeated addition and combining multiples. Noticing patterns and relationships is a key part of learning multiplication tables.

There are three simple card games provided to help practise and embed the multiplication table, and some mixed word problems at the end of each book.

### MATHS AT HOME

Maths at home diaries are fantastic value and **last all year**. They:

*include an excellent reward system with awards and stickers that encourage children to want to engage in maths at home.*

*help to develop positive attitudes to maths*

*encourage parents to be involved in their child's maths learning*

*save teachers hours of homework hunting*
